Product Consultant | Network Security & Infrastructure | Fortinet & Dell Technologies

SUMMARY

A Product Consultant in the technical team of a Middle East IT distributor, responsible for the Fortinet and Dell Technologies lines across the region. Solves Fortinet tickets end to end, from VPN, SD-WAN, and captive portal issues to firmware upgrades and hardware faults, and delivers Dell infrastructure work including hardware replacements, OS and firmware upgrades, troubleshooting, and vendor SR and RMA management on PowerEdge, PowerStore, Unity, Data Domain, PowerScale, and VxRail. Supported enterprise deployments for the Lebanese Ministry of Finance and Zain Iraq. Fortinet Certified Associate in Cybersecurity and Dell NetWorker certified. Also builds public network and infrastructure design projects in Python with automated testing.

CORE COMPETENCIES

Network Security, Fortinet Security Fabric, IPsec & SSL VPN, SD-WAN, Firewall Troubleshooting, Dell Servers & Storage, Hyperconverged Infrastructure (VxRail), OS & Firmware Upgrades, Hardware Replacement, Data Center Operations, Backup & Recovery, Vendor SR & RMA Management, Customer Coordination, Infrastructure Automation.

EDUCATION

MS in Computer and Communications Engineering | Lebanese International University **Expected 2026**

Bachelor of Science in Computer Engineering | Lebanese International University **June 2024**

PROFESSIONAL EXPERIENCE

Product Consultant, Network Security & Infrastructure | PCDealNet (ITG Holding), Beirut **2025 – Present**

- **Fortinet support:** Handle all incoming Fortinet tickets for the region end to end, analyzing configurations and debug output, applying fixes, and escalating to Fortinet TAC when needed. Cases cover IPsec and SSL VPN (including Cisco interoperability), MFA with FortiAuthenticator, SD-WAN and policy routing, FortiGate Cloud connectivity, SAML captive portals, FortiAP issues, and firmware upgrades.
- **Dell hardware replacement:** Replace parts and nodes on Data Domain, PowerEdge, PowerStore, and Unity, and disks and power supplies on PowerScale.
- **Dell upgrades:** Own full OS and firmware upgrades on Unity, PowerStore, Data Domain, and PowerEdge. Support VxRail upgrades through pre-upgrade preparation (removing and reinstalling RecoverPoint for VMs splitters and components, TPM security) and upgrade monitoring, and monitor PowerScale upgrades.
- **Troubleshooting and vendor coordination:** Troubleshoot PowerEdge and PowerStore issues, open and follow Dell SRs, coordinate remote sessions between Dell and customers, and create RMAs for part replacements.
- **Enterprise projects:** Supported a dual-datacenter Dell solution with Metro Node and clustered architecture for high availability and disaster recovery at the Ministry of Finance (Lebanon), and the deployment of Dell PowerEdge nodes with a Data Protection Appliance for scalable backup at Zain Iraq.

Sales Representative & Trainer | Ayoub Computers, Beirut **2023 – 2025**

- Customized technology solutions for individual clients by understanding their technical requirements, improving customer satisfaction.
- Trained and mentored sales representatives and developed targeted sales plans that exceeded sales goals.

PROJECTS

Fortinet Security Fabric Design – Three-Office Company (GitHub: fortigate-3-office-design) **2026**

- Designed a Fortinet network for a 140-person company across London, Beirut, and Dubai: HA FortiGate cluster, full-mesh SD-WAN over dual ISPs with iBGP, IKEv2 remote access with Active Directory and FortiToken MFA, and 10 VLAN segments per office. FortiOS 7.6 configurations are generated from YAML and validated by 220 automated tests.
- *Technologies Used:* FortiOS, FortiGate, FortiSwitch, FortiAP, FortiClient EMS, IPsec/IKEv2, BGP, SD-WAN, LDAPS, Python, pytest, GitHub Actions.

Dell Private Cloud Design – Three-Site Data Center (GitHub: acme-dell-dc) **2026**

- Designed a Dell private cloud with a primary data center in Dubai, disaster recovery in London, and an edge site in Beirut, covering SAN zoning, IP plan, VMware Cloud Foundation layout, backup with a cyber vault, and a DR runbook. All configurations are generated from one YAML inventory and checked by 153 tests.
- *Technologies Used:* Dell PowerEdge, PowerStore, Connectrix, PowerSwitch, PowerProtect Data Manager, VMware Cloud Foundation, Ansible, PowerShell, Python.

Master's Thesis – Spectrum Sensing Quality and Radio Environment Map Accuracy **June 2026**

- Built a dual-pipeline desktop application that processes raw IQ samples from the DeepSense dataset through a channelized CNN and a classical CA-CFAR energy detector, constructs Radio Environment Maps with a propagation model (log-distance path loss, wall attenuation, shadowing), and measures how sensing errors propagate into map accuracy using 8 published REM metrics and Monte Carlo validation.
- *Technologies Used:* Python, Convolutional Neural Networks, CA-CFAR, Monte Carlo Simulation, tkinter.

FortiGate Config Doctor (GitHub: Netsec-field-notes) **2026**

- Built an offline Python tool that scans FortiGate configuration backups for misconfigurations seen in real support tickets (VPN, captive portal, certificates, multi-WAN routing) and suggests the CLI fix for each finding.
- *Technologies Used:* Python, FortiOS CLI, unittest.

Smart Farm Automation System – Senior Project **June 2024**

- Led the hardware design of an IoT farm automation system and a web interface with MySQL and GIS for remote monitoring (Python, microcontrollers).

CERTIFICATIONS & TRAINING

Fortinet Certified Associate in Cybersecurity | Fortinet **January 2026**
Fortinet Certified Fundamentals in Cybersecurity | Fortinet **November 2025**
Dell NetWorker Deploy Version 2 | Dell Technologies **November 2025**
Linux 100: Fundamentals | TCM Security **February 2025**
Practical Help Desk | TCM Security **February 2025**
Practical Ethical Hacking | TCM Security **In Progress**

SKILLS

Fortinet: FortiGate (FortiOS), FortiAuthenticator, FortiToken, FortiAP, FortiSwitch, FortiClient, FortiGate Cloud, FortiAnalyzer, FortiManager.

Dell Technologies & Virtualization: PowerEdge, PowerStore, PowerScale, Unity, Data Domain, VxRail, NetWorker, RecoverPoint for VMs, VMware vSphere/vCenter.

Networking & Security: CCNA, TCP/IP, VLANs, Routing & Switching, BGP, IPsec, SD-WAN, Cisco, Active Directory/LDAP, Nmap, Enumeration.

Systems & Automation: Windows Server, Linux, Python, Bash, PowerShell, Ansible, YAML, Git, GitHub Actions.

Other: Java, C/C++, MySQL, Node.js, Django, React, MATLAB, Arduino, Raspberry Pi, Docker.

Languages: Arabic, English, French, Russian.
